

FACT SHEET

BUSINESS PROFILE

Cumberland Consulting Group is a national technology implementation and project management firm serving ambulatory, acute, and post-acute healthcare providers. Through the implementation of new technologies, we help our clients advance the quality of care they deliver, and improve their business performance.

MARKET

Healthcare providers throughout the United States.

SERVICES

Our key services focus on Healthcare Technology Process Integration – Implementation and Project Management, including:

Information Systems Planning – We work with our clients' leadership to develop short or long term plans to link technology needs with business plans. This can be a broad exercise or focused on a package implementation strategy.

Requirements Definition and System Selection – We turn the often subjective selection process into an objective one by focusing on the unique requirements of our clients and selecting the system that best meets those requirements.

System Implementation – Our experienced Project Managers have a track record of successful implementation projects with a range of vendors including Epic, eClinicalWorks, Cerner, Allscripts, NextGen, GE and others.

Technology Program Management – We reduce risk and deliver results by managing our clients' larger, higher-risk projects.

Project Management Services – Our project managers can provide assistance with a single project or an entire program of work. Our clients have found these services particularly helpful when a project is stalled or not achieving expected results.
